Questionnaire Design (IEEE Format)

What is a Questionnaire?

A structured set of questions used to collect data systematically.

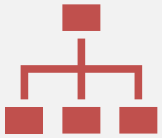

Supports research in technology, education, and social issues.

Purpose of a Questionnaire

- Collect measurable data
- Validate research objectives
- Support evidence-based conclusions
- Ensure replicability

Types of Questionnaires

- Structured (closed-ended)

- Semi-structured

- Unstructured (open-ended)

NINE steps for a questionnaire

1. Decide the information required.
2. Define the target respondents.
3. Choose the method(s) of reaching your target respondents.
4. Decide on question content.
5. Develop the question wording.
6. Put questions into a meaningful order and format.
7. Check the length of the questionnaire.
8. Pre-test the questionnaire.
9. Develop the final survey form.

Defining Research Objectives

Example 1: Impact of AI tools on student learning

Example 2: Internet access inequality in rural Bangladesh

Ensure objectives are specific and measurable.

Target Respondents

- University students
- IT professionals
- Rural/urban populations

Define demographics clearly (age, location, profession).

Types of Questions

- Closed-ended (MCQ, Likert scale)
- Open-ended
- Dichotomous (Yes/No)

Likert Scale Example

Statement: 'Online learning improves productivity'

Options: Strongly Agree → Strongly Disagree

Useful for perception analysis.

Writing Effective Questions

- Clear and concise language

- Avoid ambiguity

- One idea per question

- Avoid leading or biased wording

Sample Topic

- ‘Use of Mobile Banking in Rural Bangladesh’

- Questions focus on
  - Accessibility
  - Usability, and
  - trust
