The following is the format for writing graphs in the exam

32. **The diagram below shows the percentage of share of total world production of wheat by Asia, Europe and other part of the world from the years 1840 to 2000. Summarise the information by selecting and reporting the main features and make comparisons where relevant.**

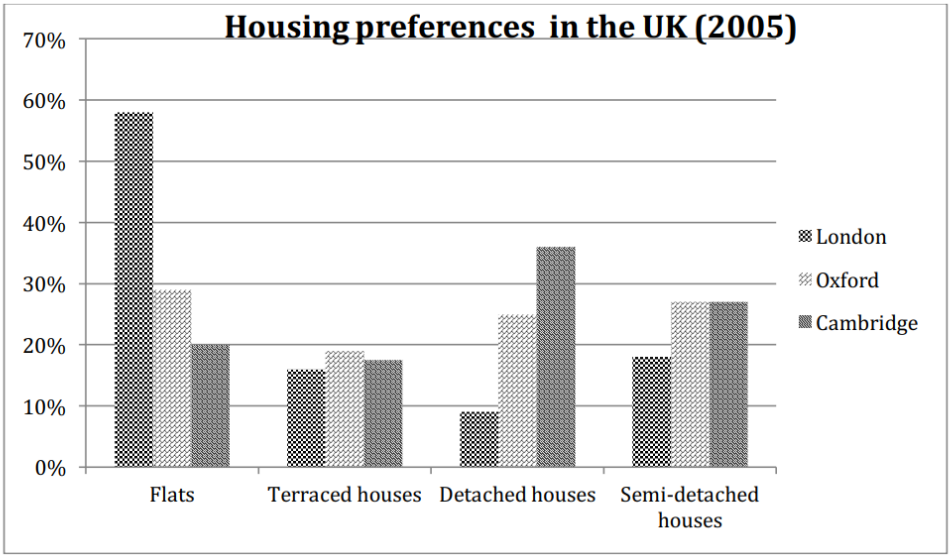

The given bar graph gives information about the share of total world production of wheat in Asia, Europe and the rest of the world, from 1840 to 2000. Overall, it can be seen, that by 2000, the difference in all the three regions in terms of wheat. Production was not much pronounced, but Asia was the undisputed leader. In 1840, Asia had the highest share of wheat production (50%), whereas Europe produced 40% and the rest of the world only produced 10%. The production of wheat in Asia fell significantly and reached an all-time low of 20% by 1920, after which it picked up again and became 40% by 2000. Europe's share of wheat production increased steadily till 1920 and reached 50%, after which it dropped and bottomed at approximately 27% by 2000. Wheat produced from the rest of the world escalated moderately till 1960 and reached 38% but after that showed a slight fall and became 33%.

31. **The bar chart below shows about the average children born per woman in 5 countries in 1970 and 2000. Summarise the information by selecting and reporting the main features and make comparisons where relevant**

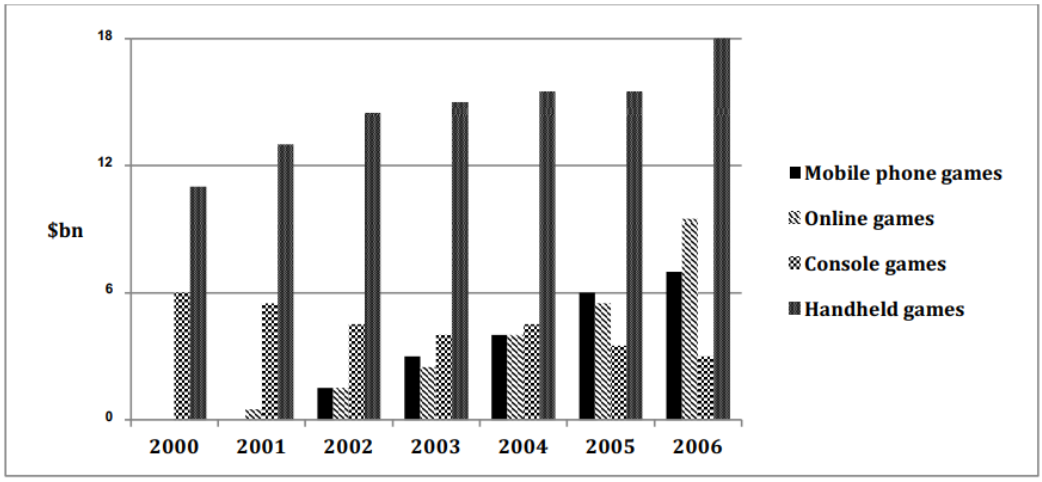

The given column graph illustrates the birth rate in 5 countries namely India, Thailand, Mexico, Spain and Somalia. Overall, in Mexico the birth rate did not change over time. India, Thailand and Spain showed a significant downward trend in the birth rate. Somalia showed an upward trend in the number of children born per woman. It is clear from the graph that in Somalia the number of births per woman increased over time, whereas in all other given countries, either the birth rate remained the same or decreased over a period of three decades. In 1970, India superseded all the given countries by having 5.2 births per woman. It was closely followed by Thailand at 4.8 births per woman. Mexico, Spain and Somalia had between 2.8 and 3.1 births per woman. In 2000, Somalia took the lead and had the highest number of childbirths per woman (3.6 approximately). India and Mexico both had around 3 births per woman. Spain and Thailand had between 1 and 2 childbirths per woman.

24. The chart below illustrates the result of a British survey on the types of houses people liked, taken in 2005. Summarise the information given below and make comparisons where relevant.

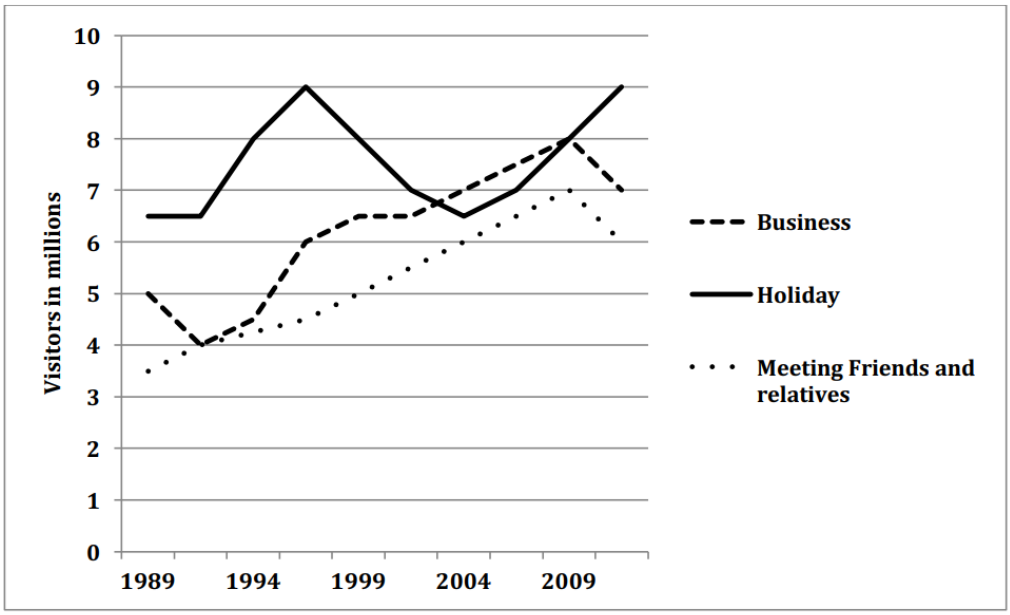

The given column graph illustrates housing preferences among people who lived in the British cities of London, Oxford and Cambridge in the year 2005. Overall, people of London preferred flats and the people of Cambridge preferred detached houses. Four types of houses are mentioned, such as flats, terraced houses, detached houses and semi-detached houses. 58% of Londoners listed 'flats' as their preferred living arrangement, a number much higher than its Oxford and Cambridge counterparts, at 29% and 20% respectively. Fondness of terraced housing was roughly equal between the three cities, all of which showed figures within the 16% to 19% range. However, a stark difference was seen among the figures representing people who preferred detached houses, with London at 9%, Oxford at 25% and Cambridge at 36%. 17% of people living in London in 2005 preferred semi-detached style of housing. Oxford and Cambridge, however, both had figures of 27%.

34. **The bar graph shows the global sales (in billions of dollars) of different types of digital games between 2000 and 2006. Summarise the information by selecting and reporting the main features, and make comparisons where relevant.**

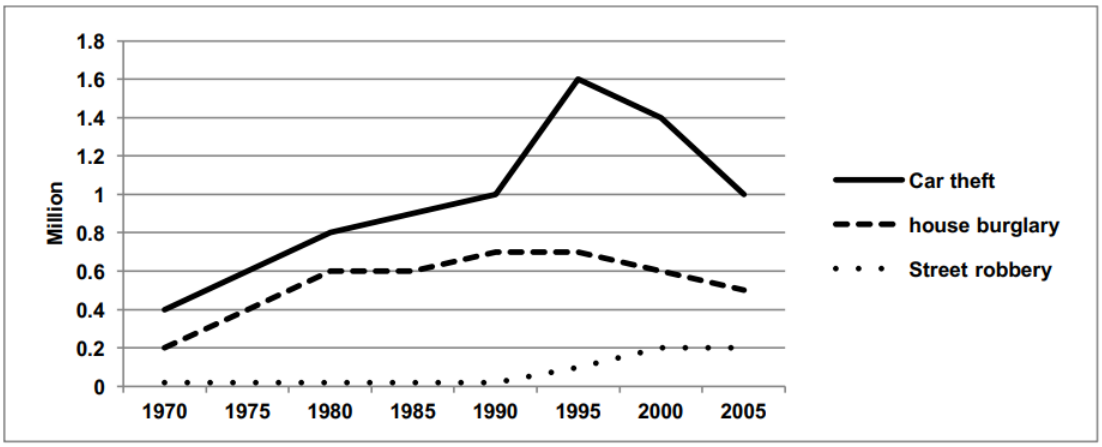

The given column graph compares the turnover in billion dollars from sales of video games of four different types, namely mobile phones, online games, console games and handheld games, from 2000 to 2006. Overall, it is manifest from the graph that hand-held games ruled the market in the entire given period. It is clear that sales of games for three out of the four types rose each year, leading to a significant rise in total sales over the 7-year period. Sales figures for handheld games were the highest in almost every year. In 2000, worldwide sales of handheld games stood at around $11 billion, while console games earned just under $6 billion. No figures are given for mobile or online games in that year. Over the next 3 years, sales of handheld video games rose by about $4 billion, but the figure for consoles decreased by $2 billion. Mobile phone and online games started to become popular, with sales reaching around $3 billion in 2003. In 2006, sales of handheld, online and mobile games reached peaks of 17, 9 and 7 billion dollars respectively. In contrast, sales of console games dropped to its lowest point, at around $2.5 billion.

39. The graph below shows the number of overseas visitors who came to the UK for different purposes between 1989 and 2009. Summarize the information by selecting and reporting the main features, and make comparisons where relevant.

The given line graph illustrates the number of foreign visitors who came to the United Kingdom for business, holiday and for meeting kith and kin, from 1989 to 2009. Overall, it can be seen that tourists who came for holiday were more than those for the other given purposes for a major part of the given two decades. About 6.5 million people travelled to the UK for holidays in 1989. This number rose rapidly and peaked at 9 million by 1997, but after that fell dramatically and reached 6.5 million in 2004. After that the number of visitors picked up again and again reached a high of 9 million in 2009. Meanwhile, business and socializing trips to the UK showed almost similar trends, starting from 3.5 million and 5 million respectively in 1989 and then rising moderately to reach 6 - 7 million in 2009. After that a fall in the number of visitors can be seen in both these cases. Throughout the given period, more people did business than those who visited their family and friends.

41. The chart below shows three different types of crime in England and Wales from 1970 to 2005. Summarize the information by selecting and reporting the main features, and make comparisons where relevant.

The given line graph compares three types of law breaking offenses in England and Wales between 1975 and 2005. Overall, reported cases of car thefts were the maximum and street robberies the minimum throughout the given period of 35 years. In 1970, the number of car thefts stood at 0.4 million, which were two times more than the reported cases of house burglaries. The next two decades saw a moderate rise in the reported cases of car robberies, and the number reached 1 million by 1990. There was a dramatic escalation in car robberies from 1990 to 1995 and the number peaked at 1.6 million, after which there was a rapid decrease and by 2005, the number of car robberies fell to 1 million. The number of house burglaries showed a similar trend as car thefts for the first 10 years, after which the number fluctuated and reached 0.5 million by 2005 Street robberies were very few (0.01 million approximately) from 1970 to 1990. Then there was a moderate growth in the number of street robberies and the number grew to 0.2 million by 2000, but after that there was stability in street robberies.

54. The table below shows the percentage of first year students who gave "very good" rating to the resources provided by a college, for three courses. Summarise the information by selecting and reporting the main features and make comparisons where relevant.

	Pre-course information	Teaching	Tutor	Resources (print)	Other resources
Economics	59%	95%	90%	81%	60%
Law	72%	62%	76%	70%	80%
Commerce	95%	95%	93%	86%	81%

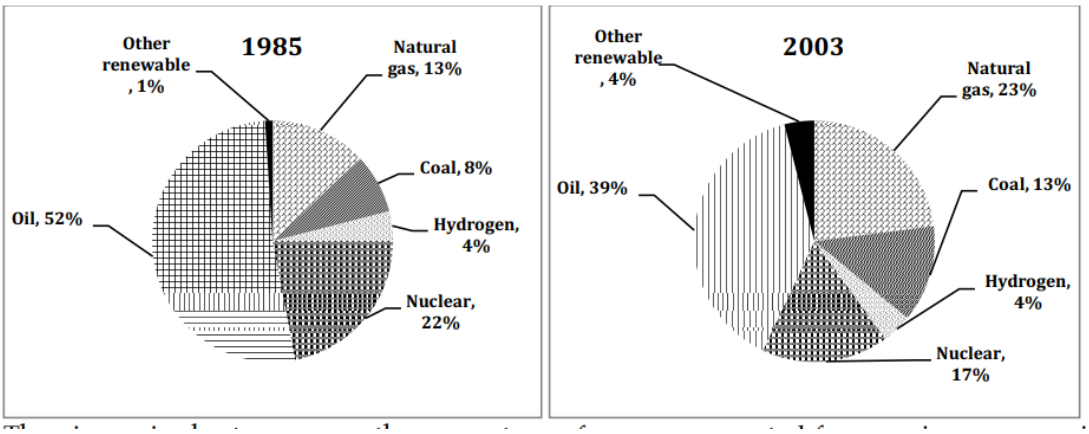

The given table represents the rating towards the facilities of three courses, namely – economics, law and commerce. Overall, the resources provided by commerce, law and economics showed varied popularity among the students. In terms of pre-course satisfaction, commerce tops in these three subjects, with 95% showing satisfaction. 72% of the students rated the pre-course information of law as 'very good' and the figure for economics was the least, with slightly lass than 60% being satisfied with it. When it comes to teaching, tutor and print resources, approximately equal percentage (95%, 92% and 83% respectively) of economics and commerce students rated these facilities as very good. However, only about 70% law students were satisfied with these services. Turning to other resources, about 80% each of commerce and law students were satisfied, whereas only 60% of economics students were satisfied with other resources.

60. The graph below shows the percentage of people who travelled by bus in the UK from 2009 to 2011. Summarise the information by selecting and reporting the main features and make comparisons where relevant.

Years	Shopping	Study	Work	Visiting friends	Day tour
2009	65	4	5	19	7
2010	56	9	2	19	12
2011	51	9	0	23	12

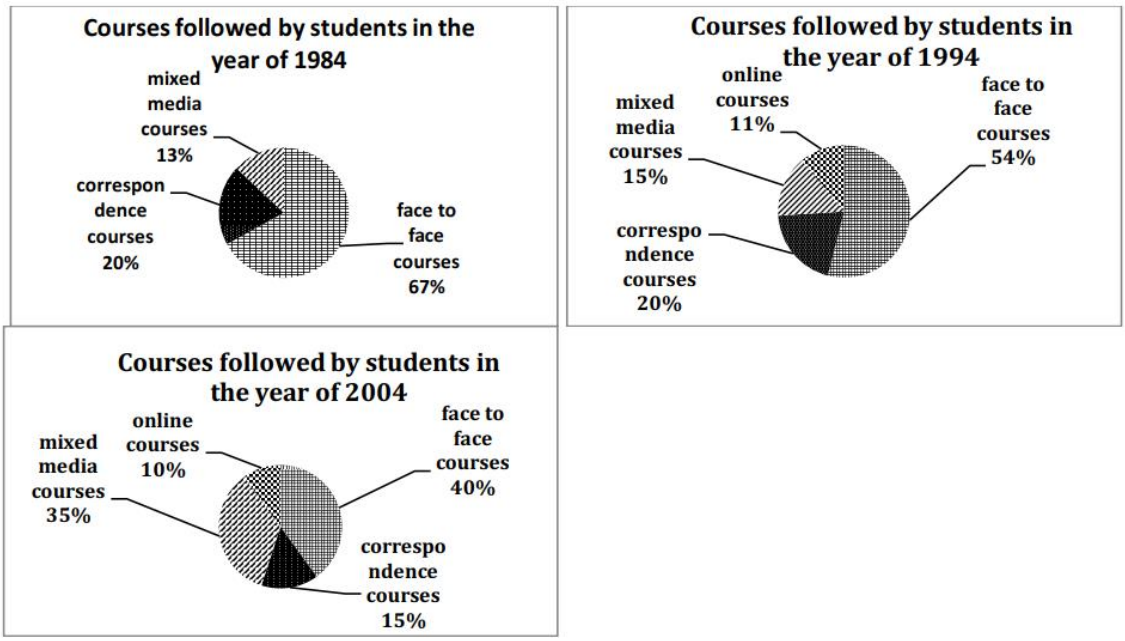

The given table depicts the proportion of people who used the bus for travelling for various purposes between 2009 and 2011. Overall, it can be seen that the use of bus for shopping and going to work became less, year by year, whereas for the other purposes the use of bus increased over the given time. In 2009, 65% people went shopping by bus. This percentage dropped significantly and reached just over 50% by 2011. Nearly a fifth used the bus for visiting friends in 2009 and 2010. This percentage increased slightly and in 2011, when just under a quarter of people used the bus for this purpose. Commuting for work by bus was done by 5%, in 2009. This percentage dropped significantly and by 2011, hardly any person travelled by bus for going to work. Using the bus for study and day tour showed similar trends, but the use of bus for day tour was done by about 3% more people in all the given years.

80. The charts below show the proportion of the energy produced from different sources in a country between 1985 and 2003. Summarize the information by selecting and reporting the main features, and make comparisons where relevant.

The given pie charts compare the percentage of energy generated from various sources in a particular country from 1985 to 2003. Overall, the maximum energy was produced from oil and the least from hydrogen and other renewable sources from 1985 to 2003. Oil was the major source of energy production throughout the whole period, although its usage dropped from just over a half (52%) in 1985 to approximately two fifth (39%) in 2003. The use of nuclear also declined from 22% to 17% over the given period. The use of natural gas and coal showed an increase from 13% and 8% in 1985 to 23% and 13% respectively in 2003. Interestingly, the proportion of energy produced from hydrogen remained stable at 4%, whereas that from other renewable sources increased from 1% to 4% over the given period of 18 years.

84. **The pie charts below show the different types of courses, which were followed by the students during the years of 1984, 1994 and 2004. Summarize the information by selecting and reporting the main features, and make comparisons where relevant.**

The given pie charts compare the ways in which students studied in 1984, 1994 and 2004. Overall, it can be seen that with the passage of time fewer students chose face-to-face method, but the multimedia courses were chosen by more and more students. In 1984, face-to-face courses were most popular with two thirds (67%) of the students opting for such courses. A fifth (20%) of the students studied through correspondence courses and the least number (13%) opted for mixed media courses. In 1994, the popularity of correspondence courses did not change. Mixed media courses gained slight popularity with 2% more students opting for them. Face to face method decreased by 13% and in their place online courses were opted by 11% students. In 2004, the popularity of mixed media courses more than doubled and 35% students enrolled in such courses. Face to face courses reduced further and 40% students chose such courses in 2004.
